EXPERIENCE

UCUP

Director Technical

Mississauga, Canada. Dec 2025 –February 2026

- Engineered and launched **UCUP**, an open-source Python framework for **Unified Cognitive Uncertainty Processing**, enabling developers to build reliable, probabilistic agentic AI systems.
- Architected a **VS Code Extension** to streamline AI agent development, integrating cognitive noise management and multi-agent synchronization protocols, developers could benefit from Marketplace
- Implemented **Cognitive noise management**, multi-agent sync, and unified protocol as part of UCUP framework.
- Identified gaps in OpenAI's offerings and contributed features to UCUP via a separate SDK.

BoomerangFX

Senior Manager - Technical

Mississauga, Canada. Nov 2025 –Dec 2025

- Led execution of complex **CRM software** and **RAG-based systems**, aligning roadmaps with enterprise strategy and mitigating cross-program risks across a **Healthcare CRM portal**.
- Served as strategic partner to senior stakeholders, translating business priorities into technical deliverables using **Atlassian** and **Rovo**, driving cross-functional alignment.
- Ensured operational excellence by managing **Azure infrastructure** (VMs, App Services, Kubernetes) and monitoring performance via **Power BI dashboards**.
- Led and mentored technical/vendor teams across Canada, US, and India, enabling high performance for globally distributed clinic clients.

Mercor

Senior Software Engineer

Mississauga, Canada. Aug 2025 –Sep 2025

- **Ranked** and compared multiple AI code outputs for correctness, efficiency, and adherence to best practices.
- Refine real **GitHub issues/PRs**, providing high-quality solutions and rich commentary to **train AI models**.
- **Audited** model effectiveness by rigorously **reviewing AI's bug fixes** and code quality across diverse repositories.
- Developed new evaluation rubrics and collaborated with research teams on advanced AI training methodologies.

Walmart

Senior Software Engineer

Bentonville, USA. Jan 2023 –Jan 2025

- Implemented AI-driven solutions (**RAG's**) leveraging Large Language Models (**LLMs**) to optimize text generation and document processing workflows, reducing processing time by **12%** while ensuring secure data handling.
- Integrated **Microsoft Vision API** and image-to-text technologies to automate visual data processing, cutting manual effort by **20%** and improving data accuracy for critical operations.
- Led **text generation** initiatives for images to support screen readers and SEO, enhancing accessibility and search visibility across **web and mobile platforms**.
- Developed a responsive **React** front-end in collaboration with UI/UX designers, translating **Figma** mockups into seamless user experiences for web and mobile applications.
- Ensured secure data handling through robust **JWT** validation, **Base64** encoding, and encrypted communications.
- **Tech Stack:** Python, React, Streamlit, Kubernetes, Google Cloud, Langchain, Milvus, Figma, OAuth, Visual Studio, IntelliJ, Gemini, OpenAI, Llama, Jira, MS Office, Splunk, SQL.

Software Engineer III - SRE/Backend

Mar 2021 –Dec 2023

- Drove a reliability program across SRE and backend (SLAs, code reviews, postmortems), improving uptime by **12%** and cutting MTTR by **15%** with **Prometheus/Grafana**.
- Scaled **Spring Boot** microservices for orders and payments, leveraging **Kafka** workflows and **Redis** caching to strengthen failure recovery in production.
- Optimized **Dataproc Spark** pipelines with autoscaling, reducing compute costs by **20%**.
- Increased fault tolerance and security using distributed systems patterns, **Istio** traffic policies, and secure integrations via **Feign** with **JWT/OAuth2**.
- Ensured transactional integrity across distributed order and payment flows using **Saga patterns** and idempotent operations.
- Proficient in DQL, Dynatrace Workflows, automation, and API integrations.
- **Tech Stack:** Java, Springboot, Kubernetes, Azure, GCP, Kafka, Prometheus, Grafana, Splunk, SQL, YAML, Jenkins.

Software Engineer II

Jul 2016 –Feb 2021

- Led and directed teams in large scale cross functional projects across different roles switching hats of SRE Lead Architecture and Developer and Application Support.
- Reviewed project requirements and translated those requirements into technical solutions that met business needs and technical standards for all stakeholders.
- Directed root cause analysis of critical business and production issues by reviewing and analyzing production data logs and system metrics across multiple services.
- Supported business objectives by collaborating with various teams and partners to identify opportunities and drive resolution while partnering with business leaders.
- Enhanced designs to prevent reoccurrence of defects ensuring on time delivery and smooth handoffs between teams and across different phases of development cycles.
- Developed a Java streaming engine to feed continuous data from databases and Splunk logs to Prometheus and built Grafana dashboards for operations team visibility.
- Worked with pre picking teams like GIF on their microservices deployments and planning for production recovery during failures root cause analysis and reprocessing.
- Worked with GCP data to analyze substitutional data and various rules setup by teams which prevented substitutions of items at order level across the entire system.
- Built a portal for operations to identify where orders are stuck across multiple rings and reprocess thousands of orders with a single click of a button for efficiency.
- Developed Client Update Service where users upload config or any file and stream it through the service reducing deployment time for configuration and version updates.
- Developed Client Bin Service where users set up bins for credit debit and gift cards from the UI and select card features from the UI for complete card management.
- Developed critical web services consumed by both Walmart and Sam's Club for Global Item Rules and Tender Rules used by POS applications during each sales transaction.
- Responsible for operations of POS applications for Walmart and Sam's Club cloud and store servers running on IBM 4690 OS across the world for global retail operations.
- Identified problems created in sales environment due to new releases or system issues and circumvented or fixed them with code test and deploy across multiple countries.
- Developed new solutions for Operations Scan and Go and payment teams in CICD environments with full automation and continuous integration and delivery pipelines.
- Moved data and databases from different environments to cloud DB including Informix to MariaDB with careful migration planning and execution for zero downtime transitions.
- *Tech stack:* Java, IntelliJ, Kubernetes, Azure Data Studio, Prometheus, Grafana, Node.js, C, C++, IBM 4GL, Jenkins/Looper, Linux, IBM 4690, Microsoft Power BI, Cassandra, Splunk, Git, One Ops, Service Now, Eclipse, Visual Studio Code, Data Stage, Azure, GCP, Looker, Kafka, JSON, XML.

Bank of America

Dev-Ops Engineer

Charlotte, USA. May 2016 –Jul 2016

- Automated real-time data alerts with **Java, TestNG, Selenium**; cut manual intervention by **25%**.
- Upgraded branch data ingestion and optimized **MySQL** workflows; reduced manual entry by **30%**.
- Built cross-platform automation for internal apps, boosting operational efficiency by **16%**.
- *Tech stack:* Java, TestNG, Selenium, Eclipse, Oracle, AutoIt, Putty, Cygwin, Unix, Windows.

American Express

Software Engineer

Hyderabad, India. May 2013 –Jul 2014

- Implemented a unified, high-performance **Java/J2EE** system for insurance rating and billing, resulting in a **15%** decrease in processing latency.
- Established **CI/CD** pipelines using **Jenkins/Git**, automating testing/deployment and accelerating time-to-market for new features.
- Reduced batch processing time by **20%** via optimization of **SQL** queries and stored procedures in **DB2**.
- Deep knowledge of mainframe environments, including SYSLOG/OPERLOG, SMF records, CICS/IMS transactions, and CA7/Autosys scheduling.
- Skilled in distributed tracing, W3C Trace Context, and mapping service dependencies.
- *Tech stack:* Java, Eclipse, Apache Avro, Big Data, JSON, UNIX, J2EE, Spring, Apache Tomcat, IBM DB2, CICS, MQ Services, SQL, Selenium, Maven, CSS, JSP, JUnit, JavaScript, log4j, Windows, SVN, Bitbucket

United States Automobile Association

Software Engineer

Hyderabad, India. Jan 2011 –Apr 2013

- Optimized **Java/J2EE/WebSphere** services, improving response time by **30%** and hardening APIs.

- Delivered insurance quoting/policy apps using HLDI specs; increased quoting accuracy by **15%** with secure coding.
- Experienced in analyzing ingested mainframe metrics, collaborating with z/OS teams.
- *Tech stack:* Java, Smart Bear, StarTeam, IBM RAD, CPP, QPP, Master Craft, share point, SOAP UI, JUnit, CICS, IMS, IBM DB2, IBMZ/OS, EZTRIEVE, Shell Script, DB2 Admin, J2EE, WebSphere, IBM Rational Team Concert, IBM Curam, XML, JSP, JavaScript, log4j, Windows.

Hewlett Packard

Associate Engineer

Hyderabad, India. Apr 2010 –Dec 2010

- Resolved complex technical issues and provided expert support for **HP** products, ensuring **customer satisfaction** and prompt resolution, which **improved response times** by **20%**.
- Streamlined workload prioritization and **managed backlogs** by escalating critical issues, effectively enhancing team performance and resolution efficiency.
- Authored and curated high-quality knowledge base content to, increasing documentation usage by **15%**, enhancing overall customer experience.

EDUCATION

Masters from Texas A&M University - Corpus Christi, U.S

2014 –2016

Bachelors from Jawaharlal Nehru Technological University - Hyderabad, India 2005 –2009

TECHNICAL SKILLS

Languages: Java, Python, SQL, C/C++, Rust, React

Backend/Distributed: Spring Boot, Kafka, Redis, REST/Feign, Istio, Saga

Cloud/Data: GCP (Dataproc/Spark), Azure, Kubernetes, Docker, CI/CD, MariaDB, DB2, Milvus

Observability/Security/AI: Prometheus, Grafana, Splunk, OAuth2/JWT, LLMs, LangChain
